Asset Management Solution

Asset Management Solution

Precise knowledge about the assets that a business owns is vital to enable owners to effectively manage for risk, track their movement and condition and to maintain accurate accounting, something which all businesses are legally bound to do. Whatever business you're in, at OCS we can put this information at your fingertips.

Through our partnership with a leading software specialist, we offer a complete asset management solution. Our system provides organisations with a comprehensive enterprise-wide asset management software tool that allows assets to be managed throughout the lifecycle process.

The asset management process begins with the tagging of all assets using barcodes and the building of an asset database; this can be integrated with systems such as SAP and Oracle.

Using teams of highly-trained and experienced personnel, we undertake periodic auditing, capturing data using PDAs to increase productivity and reduce paperwork. Reports are produced automatically and the results can be made accessible online through a secure log in.

The additional benefits provided by the system include maintenance recording, location hierarchies, cost centre hierarchies and the determination of depreciation, which is crucial for effective accounting as well as lease control, and the system alerts clients to lease expiry dates. The OCS asset management solution allows the control of stock items and an inbuilt ordering tool is available to prevent an out of stock situation. The software also integrates with purchasing systems to automatically update the asset register on receipt of new goods.

At OCS, we also offer a fixed asset audit service; this allows clients to identify assets they never knew they had as well as enabling the write-off of redundant or missing items, providing immediate tax benefits.

So for a cost effective and accurate asset management solution contact OCS.

At OCS, we are also able to provide the following specialist asset management services:

Asset bar-coding

RFID

System integration

PDA hardware

Financial software

Project services
