

Asset Verification & Auditing

Maintaining an accurate asset register is essential for any business to ensure effective accounting and management reporting, as well as for statutory compliance. However, unless undertaken by highly trained staff, this can be a time-consuming task with no assurance of accurate results. That's where OCS can help.

At OCS we've been assisting businesses of all sizes with our asset verification service for over forty years. And from single-sites to multiple locations both in the UK and overseas, our customers include education establishments, companies in the health, defence and manufacturing sector, port authorities and major sports venues. Our experience means that, today, we're recognised as one of the leaders in this highly specialised field.

Inventories are conducted by experienced personnel who meticulously record each and every item using hand-held data terminals to give them a unique and discreetly-positioned barcode. Detailed information as to the description, quantity and condition of each item can then be provided to the business owners or management as an electronic inventory in spreadsheet format.

In addition, we can provide an up to date valuation of the assets recorded either for insurance purposes, based on the cost of replacement, or at market-value if required for balance-sheet accounting, business sales or transfers. In such cases our independent status and reputation for accuracy and integrity brings peace of mind to all parties concerned.

So for an accurate analysis of your company's assets, choose OCS.

At OCS, we can also offer a total asset management solution along with the following specialist services:

- Asset bar-coding*
- RFID*
- System integration*
- PDA hardware*
- Financial software*
- Project services*
